Chad Koslovsky

Build the services people can depend on.

Milliken, Colorado · chad@koslovsky.xyz

`Sr. Software Engineer - Backend (PST / MST ONLY) | Lively`

View my interactive resume and work: https://lively-backend.koslovsky.xyz

01 PROFILE

I connect product requirements to the services, data and operational work behind them. My focus is making boundaries explicit, following problems through the stack and owning what happens after a system is delivered.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Own client systems from requirements through TypeScript/Node.js services, data, infrastructure and direct support.

Build OAuth/OIDC authentication, tenant-aware shared services and access-controlled SaaS integrations.

Product Engineering and IT (Long-Term Contract) · NuPrice | Client engagement within Technomancy IT | 2019-2021

Built and operated marketplace-data ingestion, repricing rules, accounts, subscriptions and billing.

Owned analytics, customer support and technical operations across the application and its services.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC, handled engineering escalations and built tooling for hosting and colocation support teams.

Worked across AWS, Docker and recovery; ran SOC 1/SOC 2 audits and later held sole systems-engineering responsibility for about a year.

Systems / Software Engineer · Office Evolution | 2014-2015

Built centralized applications connecting CRM, provisioning, onboarding and service operations across locations.

Worked with the CEO and CIO to turn business handoffs into shared operational workflows.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Supported business networks and endpoints directly with owners and end users in managed services.

Built diagnostic tooling, monitored recurring problems and handled on-call troubleshooting and recovery.

03 SELECTED WORK

Technomancy platform | Connected services and recovery · Own technical practice and client-operations product

Joined support, CRM, scheduling and billing through TypeScript/PostgreSQL services with tenant-aware access boundaries.

Delivery tooling records Git-derived release identity and checks health; separate tooling verifies PostgreSQL restores.

ProofMark | Identity and document workflow state · Completed client engineering contribution

Designed signing workflows spanning identity, PDF fields, routing, audit history and integrations.

Connected APIs and PostgreSQL with explicit security-sensitive state, verification and fallback paths.

04 CAPABILITIES

TypeScript / JavaScript / Node.js / API design · PostgreSQL / relational data modeling / tenant-aware services · OAuth / OIDC / integration boundaries / auditable workflows · AWS / Docker / release and restore tooling / production diagnosis
